Just Wondering...

I am not a big supporter of conspiracy plots and/or theories, but once in a while something pops up that doesn't quite pass muster as being logical.

The latest situation came to mind when I saw a recent ad for one of the internet protector sites. You know the ones that promise to protect you and your computer from viruses, scams, and maybe even the common cold. This particular ad suggested that a 'bad' virus appears about every 12 seconds or so.

While checking antivirus and malware statistics on the web, we found the following 'warning', "560,000 new pieces of malware are detected daily, and over 1 billion malware programs exist currently. The first half of 2022 alone saw 236.7 million ransomware attacks globally, with an average cost of \$4.54 million per incident."

If this doesn't scare the bajebeers out of us, not much will.

It is also true that some systems like Microsoft provide built in antivirus programs,

Dave Allen

like Devender, that may or may not protect your computer depending on who, or what vendor, you ask.

My question within this whole arena is pretty simple, if the Googles of the world can keep track of my searches, monitor my social media and sell my habits to a variety of good and bad vendors,

Why can't they simply kill, delete or ban those bad apples that are messing up our computers, ipads and cell phones?

Could it be there is too much money available for keeping these problems ... and then selling solutions? I do not know and I am not enough of an expert to sort it out, but the logic of the situation is simply not clear.

We have a plethora of computer experts here in Port. Maybe someone knows the answers or has a solution.

Cheers!
